1 [Technical papers: mobile and distributed computing: A dynamic pair-program sending architecture for industrial remote operations](#)

Takeshi Inoue, Yasutaka Hino, Kouji Hayashi, Masanori Narukawa

May 2002 **Proceedings of the 24th international conference on Software engineering**Full text available: pdf(837.69 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Remote operations such as maintenance, diagnoses, and command executions are more and more needed in industrial automation domains. Remote operation software that flexibly responds to changes in requirements from factory, chemical plants, or remote-side operators is desired. We developed a dynamic program-sending and automatic starting architecture for this purpose. In the architecture, a pair of programs appears in one remote operation context at a time. One program called a "Worker" is dynamic ...

2 [RFC3084: COPS Usage for Policy Provisioning \(COPS-PR\)](#)

K. Chan, J. Seligson, D. Durham, S. Gai, K. McCloghrie, S. Herzog, F. Reichmeyer, R. Yavatkar, A. Smith

March 2001 rfc, RFC Editor

Additional Information: [full citation](#)

This document describes the use of the Common Open Policy Service (COPS) protocol for support of policy provisioning (COPS-PR). This specification is independent of the type of policy being provisioned (QoS, Security, etc.) but focuses on the mechanisms and conventions used to communicate provisioned information between PDPs and PEPs. The protocol extensions described in this document do not make any assumptions about the policy data model being communicated, but describe the m ...

R. Sekar, V.N. Venkatakrishnan, Samik Basu, Sandeep Bhatkar, Daniel C. DuVarney

 October 2003 **Proceedings of the nineteenth ACM symposium on Operating systems principles**
Full text available: [pdf\(301.30 KB\)](#)
 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This paper presents a new approach called *model-carrying code* (MCC) for safe execution of untrusted code. At the heart of MCC is the idea that untrusted code comes equipped with a concise high-level model of its security-relevant behavior. This model helps bridge the gap between high-level security policies and low-level binary code, thereby enabling analyses which would otherwise be impractical. For instance, users can use a fully automated verification procedure to determine if the code ...

1 [First International Workshop on Persistence and Java](#)

Malcolm Atkinson, Mick Jordan

November 1996 Technical Report, Sun Microsystems, Inc.

Full text available: pdf(1.54 MB)

 Additional Information: [full citation](#), [abstract](#)

These proceedings record the First International Workshop on Persistence and Java, which was held in Drymen, Scotland in September 1996. The focus of this workshop was the relationship between the Java languages and long-term data storage, such as databases and orthogonal persistence. There are many approaches being taken, some pragmatic and some guided by design principles. If future application programmers building large and long-lived systems are to be well-supported, it is essential that the ...

2 [Safe Class and Data Evolution in Large and Long-Lived Java\[tm\] Applications](#)

Mikhail Dmitriev

August 2001 Technical Report, Sun Microsystems, Inc.

Full text available: pdf(876.82 KB)

 Additional Information: [full citation](#), [abstract](#)

There is a growing class of applications implemented in object-oriented languages that are large and complex, that exploit object persistence, and need to run uninterrupted for long periods of time. Development and maintenance of such applications can present challenges in the following interrelated areas: consistent and scalable evolution of persistent data and code, optimal build management, and runtime changes to applications. The research presented in this thesis addresses the above issues. ...

3 [Software process modeling and execution within virtual environments](#)

John C. Doppke, Dennis Heimbigner, Alexander L. Wolf

 January 1998 **ACM Transactions on Software Engineering and Methodology (TOSEM)**,

Volume 7 Issue 1

Full text available: pdf(232.51 KB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In the past, multiuser virtual environments have been developed as venues for entertainment and social interaction. Recent research focuses instead on their utility in carrying out work in the real world. This research has identified the importance of a mapping between the real and the virtual that permits the representation of real tasks in the virtual environment. We investigate the use of virtual environments—in particular, MUDs (Multi-User Dimensions)—in the domain of softwa ...
